Welcome to the 4EU+ AI Days! The event brings together visionaries, policymakers, education specialists and researchers to explore AI's impact on society, policy, and the future of education and research. Join us for two days full of discussions, panels, and workshops designed to foster collaboration, innovation, and a deeper understanding of artificial intelligence's role in shaping our world.

The 4EU+ AI Days, hosted by Charles University, is a special event focused on exploring how artificial intelligence (AI) affects our lives in many different ways. This event is a part of a bigger effort by the 4EU+ Alliance, which includes universities from across Europe working together to push forward research and education in EU.

Charles University is taking the lead in organizing this event to start important conversations about AI's role in society. They aim to gather experts from various areas to talk about the opportunities AI offers and the challenges it brings, especially in terms of ethics, learning, and how we live together. Charles University is creating a space where people from different countries can share their knowledge and thoughts about AI, making sure the event includes a wide range of perspectives.

One of the highlights of the 4EU+ AI Days is the evening networking session. This part of the event will feature an AI Technology Showcase, where attendees can see the latest AI technologies up close. It's a great chance for everyone there to meet, share ideas, and possibly start new projects together. You'll have the opportunity to meet experts, industry leaders, and other attendees who are also interested in AI. This session is perfect for making new connections and learning more about the exciting developments in AI technology.
